

Precision Steel Fabrication Solutions for Data Center

Infrastructure: 68 Years of Fabrication Excellence Supporting Mission-Critical Projects

Since 1958, Superior Metal Products has been a trusted manufacturing partner providing precision metal fabrication solutions for demanding industries. With nearly seven decades of experience, we combine skilled craftsmanship, advanced fabrication technology, and responsive customer service to deliver high-quality steel and sheet metal components that meet the rigorous requirements of today's data center construction market.

As data centers continue to expand throughout Pennsylvania, New Jersey, and the Northeast, Superior Metal Products is positioned to support contractors, engineers, manufacturers, and developers with dependable fabrication solutions built for speed, accuracy, and long-term performance.

Data Center Fabrication Capabilities

Superior Metal Products provides custom fabrication services for a wide range of data center applications, including:

Structural & Fabricated Steel Components

- Custom steel brackets, supports, frames, and assemblies
- Equipment mounting structures
- Custom fabricated support for electrical and mechanical systems
- Precision-fabricated components for infrastructure installations

Electrical Infrastructure Components

- Custom enclosures and housing
- Equipment covers and protective panels
- Electrical cabinet components
- Mounting plates and fabricated assemblies
- Power distribution support components

Mechanical & HVAC Support Fabrication

- Equipment supports and frames
- Mounting hardware and brackets
- Custom-fabricated mechanical system components

OEM & Contractor Fabrication Support

- Prototype development
- Production fabrication
- Contract manufacturing
- Build-to-print fabrication
- Custom assemblies and kitted components

Why Data Center Partners Should Choose Superior Metal Products- Experience You Can Count On

For 68 years, manufacturers, contractors, and businesses have relied on Superior Metal Products for precision fabrication, consistent quality, and dependable delivery.

Built for Mission-Critical Environments

We understand that data center projects require accuracy, reliability, and schedule discipline. Our team works closely with customers to provide fabrication solutions that support demanding construction timelines.

Complete Fabrication Capabilities Under One Roof

Our capabilities include:

- Engineering and fabrication support
- Prototyping and production manufacturing
- Shearing
- CNC punching
- Precision forming
- Welding and assembly
- Powder coating and finishing

Flexible Production Support

Whether you need a single custom component, a prototype, or recurring production quantities, Superior Metal Products provides the flexibility to support projects of varying size and complexity.

Supporting General Contractors, Electrical Contractors & Equipment Manufacturers

Superior Metal Products can partner with:

- Data center general contractors
- Electrical contractors
- Mechanical contractors
- Switchgear and electrical equipment manufacturers
- OEM equipment suppliers
- Engineering firms
- Construction subcontractors

We provide the fabrication expertise needed to help keep projects moving—from early prototypes through full-scale production.

Quality, Reliability & Partnership

At Superior Metal Products, quality is built into every stage of our process.

Our experienced team works closely with customers to ensure fabricated components meet project specifications, performance requirements, and delivery expectations.

Our goal is simple:

to become a trusted extension of your project team by delivering dependable fabrication solutions when and where you need them.
